

# Cloudfresh Value Stream Assessment

Assess your organization's software delivery process and performance

## Free, hands-on consultative analysis

Identify current state, future state, and key focus areas of improvement

## Industry benchmarking

Benchmark against industry standards organizational value streams e.g., DORA metrics

## Actionable recommendations

Cost/benefit analysis, value stream map, recommendations, and benefits

Most organizations aspire to make developers more efficient, deliver better products faster, and reduce security and compliance risk. However, manual processes and duplicate work impacts their overall software delivery speed and performance. Add to this frequent context switching, idle waiting time, and lack of visibility into software delivery performance, they are frequently in catch-up mode rather than leapfrog mode.

A Value Stream Assessment is a free value stream discovery engagement with Cloudfresh that will help you understand the current state of your software delivery workflow, envision a future state, and provide prescriptive recommendations to achieve the envisioned future state - putting your organization's value stream on the path to continuous and measurable improvement.

## Value Stream Assessments in action

Cloudfresh is a collaborative exercise between the GitLab team and stakeholders from your team. It includes a planning session, a workshop with your team, and an executive presentation to summarize the findings. As an outcome, we will provide strategic recommendations on areas of software delivery process and toolset improvements - including an objective and recommendation to retain, integrate, or replace specific tools to meet organizational goals. It includes:

- 1 Identifying current state
- 2 Defining business goals and desired future state
- 3 Identifying constraints
- 4 Building a Value Stream map
- 5 Conducting a cost benefit analysis (where appropriate)

In short - Cloudfresh bridges the gap between where you are now and where you want to be.
